

New wood species, new dimensions and improvement of existing recipes are easiest to develop in laboratory scale. In our R&D laboratory we are able to test and develop new recipes with laboratory size kilns to ensure perfect quality of heat treated wood product from the first production batch.

Do you have a new or old kiln? Are you in need to get samples? We can do it for you with our 0,1 m³ container. **Make sure you have proper recipes for each load you treat. That fact together with Preventive Maintenance will guarantee the quality!** ☐
